Project Name	: City Bus Intelligent Transport System (CBITS) The overall scope of the module implementation will consist of design, development, testing, installation, commissioning, training, handholding operations, and management of facilities for a project term period of 10 years by the CBITS vendor. This project design must be scalable up to fleet size of 2000 Buses, 200 depots and 400 terminal including 1500 bus queue shelters. SUDA envisages for implementing City Bus Intelligent Transport System to bring a state of the art system for enhancement and monitoring of operational efficiency and automation to its transit and other allied operations. CBITS is expected to meet SUDAs and UPTS objective of enhancing service standards, better planning and efficient operations; bring in commuter centric services, integration of para-transit, and automation of collection and payment of transit fares, revenue generation services like advertisement system. Public transport should always be the hallmark of a good transportation system for a city or a state. The role of public transport is vital, particularly to reduce the use of personalized transport. This system should be such that it can work in co-ordination with the existing transportation systems.
