## **Projects:**

### **Project 1**

#### **Project Brief**

It is the ecommerce domain based project and responsive site. The e-commerce platform will provide product catalog, order management, and online customer service capabilities. Key features of the platform will include a website that will allow secure user access, product catalog categorized to allow for easy searching, web based order entry with order

confirmation, request for quotes, advanced reporting, e-mail customer service and online payment

### **Testing Techniques and Methodologies used within the project**

Manual testing - smoke, functional, nonfunctional, re testing, regression, integration, system, positive, negative, acceptance testing and agile model

#### **Role**

Understanding and analyzing the test requirements, contribution to test plan documentation, create/run test scenarios,

Generating the test data and preparing the weekly status reports

client Server application testing, manual test execution and was involved in various testing phases like Sanity, functional, re testing, regression, system and smoke testing performed functionality, UI, acceptance testing, manage & installation of builds through version control system, testing of iOS/Android/Windows applications using mobile/tablet, create the task board, test case using trello

Defect review meetings with the development team, responsible for conducting test of software components by coordinating with

Product engineers, bug tracking and error reporting, day to day build testing and delivery to client with status report

### **Project 2**

#### **Project Brief**

This project is for record video and compress video with audio volume and user can increase and decrease the volume through app features and create a graph of the video.

#### **Role**

Work as an individual for testing all and technical queries and build best user experience and high performance application.

### **Project 3**

#### **Project Brief**

This project is an online supermarket and a grocery store that facilitates online shopping for day-to-day needs of the customers. This is a personal assistant to meet your everyday needs of an online supermarket. At application, customer can select nearby stores available, and order things as per their needs. Users can also search the product and also filter and sort the product based on available preferences. The customer can also get alternative products in case the desired item is not available in the store. A person goes to the store and buys the ordered items and delivers on given location at specified delivery time.

### **Testing Techniques used within the project**

Functional testing, smoke testing, integration, system testing, UAT Testing

#### **Role**

Work with team for resolving technical issues and manual testing techniques, test execution, mobile testing in iOS, functional Testing, regression testing, etc.

### **Key Challenges and Results**

We wanted to deliver products which provide the best shopping experience to user and works with in sync with website and provide flawless performance to user
