12th	CBSE	2015	77
10th	JAC	2013	89

## PROJECTS

### Inventory Management System

It is web application in which there are two modules, Customer Module and Admin Module. A store manager as Admin can manage its inventory as he/she can add more mode product if inventory is low, view current stocks of products. For customer module a customer can order product from the web app, also maintain customer profile on the web app after registration.

**Application:** It reduces paperwork and manages the inventory smoothly.

**Technologies used:** Java 8, Spring Boot, Spring data JPA, MySql, HTML, CSS, Javascript, Bootstrap, Angular

### Sentiment Analysis using Twitter API

Sentiment of the tweet is analyzed and then compared using machine learning algorithms. Naïve Bayes and Support Vector Machine algorithms are used in this project.

**More scope:** This project is helpful in analyzing sentiments, and can also tell about which algorithms is better in terms of accuracy, time and volume of data.
