Experience

Experience

- Overall 2 year of experience in developing server-side components using J2EE technologies, java frameworks, Rest API.
- Programming experience with Core Java, Spring Boot, Hibernate, Microservices, Rest API.
- Programming experience with Angular .
- Programming experience with Python
- Experience with Amazon Web Services
- Active participation in architectural workshops
- Implemented Microservices architecture using Java Spring Boot using restful architecture.
- Good knowledge of Object-Oriented Programming concepts.
- Work experience with Oracle and MySQL databases.

Programming Languages :

Procedural language :	C Programming
Object Oriented Programming :	C++ Programming, Python 3.0
Virtual Machine based Programming :	Java Programming
Scripting language :	PHP

Skill Set

- **Java Technologies:** JDBC, Servlets, JSP
- **Databases:** MySQL
- **Web/App Servers:** Tomcat, JBoss
- **Operating Systems:** Linux, Windows NT
- **Java IDE:** Eclipse
- **Python IDE:** PyCharm
- **Frameworks:** Spring, Spring Boot, Hibernate, Rest API, Microservices.
- **TypeScript :** Angular 7
- **UI Technologies:** HTML, JavaScript, Ajax and jQuery
- **Tools:** Git, Maven, JUNIT.
- **Messaging:** Introduction to RabbitMQ

Project Experience

1. Project Name: Subscription platform for digital products

Employer: 18North Systems pvt ltd

Technologies: Java, Spring Boot, Hibernate, Microservices, Rest APIs

Role: Senior Developer

Database: MySQL

Project Description: Customer's remittance platform is a pioneer in online cross border remittances and provides quick, convenient and secure International money transfers to India. It offers best exchange rate on transferring money to India. The engagement was to design and develop microservices based platform to host the subscriptions for the users of the Customer's platform and productize the functionality for similar products. The entire platform was conceptualized as three microservices with pragmatic architecture through various patterns.

2. Project Name: Tenant Product

products Employer: 18North Systems pvt ltd

Technologies: Python Django Framework, Angular 7

Role: Junior Developer

Database: MySQL

Project Description: Tenant is Product. They are using images download using Subscription Platform Subscription plan. Third party use payment gateway.

Roles and Responsibilities in the project:

- Analyzing the requirements received from the client
- Working on designing and coding (Using Java).
- Implemented Micro-services architecture using restful architecture
- Implemented REST API's (using Spring Boot)
- Developed Persistence layer using Hibernate
- Involved in the Unit test and Integration testing.
- Working on designing and coding (using Django Framework)
- Experience on Amazon Web Services.
- Using Services Root User, IAM user, EC2, Rout53, SES, SNS and Billing.

Education/Certifications

- Master of computer science (MCs) in Information Technology, Savitribai Phule University Pune, With 82.20%.
- Bachelor of computer science (BCS) in Information Technology, Shri Shivaji Collage, Paranda., with 69.25%.
