Project Undertaken

Project Name: CRM**Role : Dot Net Developer****Platform Used : MVC, JQuery, AngularJs, SQL Server Description:**

It's kind of CRM Application where a training institute can easily track their student data. where we have different user store or access and utilise to manage this data with application.

Any user can easily fill the information of the leads comes in that institute also who joined or Convert that leads as a student in that institute.

All information can store or easily manage this application also the good leads or the student who didn't join but their records are store in this application so this application help institute to fetch all the contacts information or those leads or student who didn't join that time. We can later contact to those leads in future. Also with the application we get to know each and every leads or student who joined

Responsibilities:

Used 3-tier architecture for presentation layer, the Business and Data Access Layers and were coded using C# as per user Requirements.

Make changes in the project with discussing the group for new requirement.

Work on Enquiry mod
