for Mobile Cloud Computing.

**Software Requirements:** C, Java, HTML5, CSS.

### **PROJECT DESCRIPTION:**

- This is previously proposed system in which senders encrypt message with certain attributes of the authorized receivers.
- But this has some issues of Confidentiality and Data Integrity.

- This project is done based on hierarchical access control method using a modified hierarchical attribute-based encryption (M-HABE) and a modified three-layer structure.
  - So, a modified system is proposed in which users with different privilege levels have different rights to access the part of sensing data coming from the mobile devices.
  - Therefore, one same data has to be encrypted into cipher text once, which ought to be able to be decrypted multiple times by different authorized users.
- s have the advantage that is one cipher text can be decrypted by several keys.
- The system is useful for hierarchical multi-user data-shared environment, which is extremely suitable for a mobile cloud computing model.
