- Shell script

Assignment Details

Project Name: Cases Copying Online
Duration : 12 months
Description :
In this project we convert manually procedure of given case detail copy to third party to online procedure. Below brief description of project given
1)There are two type of user I) Normal User ii)Lawyer User So there is registration for both type of user through email. User enter there email with password , so we send confirmation link to there email but lawyer user can only able to give that email which is registered on highCourt with unique code of lawyer.
2)After registration user will login and able to check case detail by entering case number but only disposed case can be seen by regular user and pending case can be seen only by lawyer whose name is listed in that case and disposed case will seen by all user.
3) There is admin panel which will approve client request for payment
4)In case detail we will show number of pages of judgement or order detail and total amount to be paid by user to get that case judgement copy.
5) User have to paid amount by token which he will get from third party ,we will check that token is valid or not with amount by sending request to third party and if all data is valid then we locked that token so it will not used for second time. 6)After Payment client can take judgement copy form copying section of High Court.
Project Name: Leave management System and Case Information System
Duration : 12 months
Description :

Its main purpose is to modify and update **software** application after delivery to correct faults and to improve performance, changing layout and fixing all production issue and improve its performance so the client can use this in effective manner.

Project Name: Tata Power

Duration: 1 year

Description : In this project we count different data from database and shown on front end. Below is given brief description about that

1) i) Consumer Registered a) Firstly we show total consumer registered to our website. b) secondly we show consumer registered through android phone. c) Lastly we show consumer registered through iphone.

ii) After that we show total loyalty of user from database. Iii) Then we show total earn point of user .

2) i) Total Transaction Analysis a) Firstly we show total transaction of user on our website b) secondly we show all success transaction of user in our website. c)Thirdly we show failure transaction of user because of our system i.e failure from admin side. d)Lastly we show payment Gateway Failure i.e user has not paid the given amount.

ii) In all the above transaction we have also given it value in box sequentially for that transaction .

3) Today Transaction Analysis i) It is similar to above point i.e Total Transaction Analysis but instead of total we show only today transaction.

4) Monthly Transaction Analysis i) It is similar to above second point i.e Total Transaction Analysis but instead of total we show only last month transaction.

5) Download Transaction Analysis In this section we have given option for download transaction for different schedule a)For total transaction b)For one month transaction c)For today transaction d)For transaction between two given date

6)Download Loyalty of user In this section we have download option for loyalty description of user for different schedule a)For total loyalty of user b)For loyalty of user for one month c)For loyalty of user for today d)For loyalty of user between two given date

7) At last we have given download button for consumer description

Project Name: Treo

Duration : 24 months

Description : In this project we record the sensor of machine in database and show that data on browser . Initially We take data from database to show sensor status,then after we take mtqq data from server and according to that we update client side browser. We also show latest time updated in client side. We update client side through javascript , from data that we get from mtqq server .In this project we have also given option to download sensor record as pdf or csv format.

Project Name: NewsGcc

Duration: 24 months

Description: This Project is made on Laravel Framework. In this Project we show news to the client which is uploaded by anyone of below given position 1)Admin 2)Moderator 3)Contributor There is a page which is used by above position person in which there is option for news in arabic or english and also for type of news that is divided according to it type and region. When new news is added to website it send to registered user in there mobile .All news which is added by Moderator or Contributor is published only by Admin , Until it is not published by admin ,that news is not shown on client side and admin has also power to delete news or unpublish news . Admin has power to delete moderator or Contributor. There is option field in news portal where admin can add region and there is also category i.e sports,politics etc;
