- We can also manage District/Block nodal officers by this project.
- We can also manage vender's escalation details by vender's escalation matrix part of project.
- We can manage IP Phone Details in this project.
- We can manage Employees of RajSWAN by using RajSWAN Operator's Manpower part in this project.
- We can manage the equipment's which is utilize in various sites of RajSWAN.
- We can also manage Electricity Portal, Inventory Portal and Preventive Maintenance Monitoring portal by using this project.

RSWAN FMS Project Monitoring System Automation To Create HO Sites Automatically

- It is a RPA(Robotic Process Automation) project which is use to automatically insert or create HO Site records from excel sheet.
- It inserts per record in 200ms, by using this project we can insert more then 1000 records with in few times.

RSWAN Attendance Management System

- It is an online attendance register system developed for the employees of the organization.
- An employee can mark their attendance using the web portal on the office system they have been provided.

AdVia Advertisement App for Android TV

- This app is used to reflect .mp4 format video advertisement which are rendered one after another in a sequence and to be viewed on VideoView.
- The responses are fetched from server using Retrofit API. The responses in JSON format are then converted into java objects by using GSON API.

Aryazon App (ECommerce App)

- Converted the e-commerce website to a user-friendly mobile application to help users work on the go.
- Users need to login once in app and app will not logout like website, if user want to logout so user can do that by manually, like a normal app.

PG Educate (Educational Video Lecture App for ALLEN)

- We made an educational app for students so that they can watch video lectures, can modify voice accent, can send reviews etc. Videos are accumulated on a category basis.
- Data is fetched from server using Volly api in JSON format which is then converted to java object by GSON.

Voting App (App is use by Admin when someone generate call then voting occur)

- Used broadcast receiver to handle the incoming call and sent a hit into database via. JSON.
- Once user has installed app; any call lends on phone will then broadcast receiver receive event and fetch mobile number of call and send it on server by POST method using Retrofit API.

Kids Pre School (Educational App)

- It is a quiz app for kids (aged <5), where users get MCQs.
- Each question reflects in a fragment.
- We applied sound effects for correct and wrong answer.

GaurGlobalVillageMaintenance (Real Estate App)

- It is a Real Estate app used by the residents of a locality where they can book complaints online and can also pay using the online payment methods.
- Users receive notification after booking confirmed. Users can register their tenants also.
- User can access the events gallery of society.

E-Library App(Book Reading App)(Ongoing)

- Fetching book response from JSON and reflect all information on main activity.
- Arranging all books into categorical format.
- Once we click on book then a book description page appears wherein there is a read button, once we click on that, user can start reading book.

Pocket Ocean App (File Manager App)

- It manages entire data of phone and sink it to server.
- Once a user require data, then user can download.
- This app work like dropbox.

TPicker (File Processing Tool)

- We can grab text from any image file and edit that text, and we can create word or pdf document.
