### Play app *(UX/UI)*      **Jan 2020**

- Goal was to provide an UI interface that could simplify the numerous amount of video's of user synced from multiple platforms shared by the user

- I create a User interface design with a simple home screen on the entry of app with suggested app via algorithm.

- As per client requirement there should be minimal screens to use in this app, SO I create the best user journey which could work of every user with multiple tasks, on a single screen.

### Evintra *(website design)*      **Aug 2020**

- It's a travel and event Booking website, Client's requirement was to merge every page of there website with the new home design

- I worked on every basic page of website as per privacy policy, faq, about etc.

- Redesign the overview page of event listing with multiple filter options of list view and card view of new page

### Majestic train India *(HTML)*      **may 2019**

- This was a private train booking website for traveling purpose. Goal was to provide a traditionally looking website of Rajasthan origin to enhance the view of website.

### Majestic train India *(UI)*      **may 2019**

- This was a private train booking website for traveling purpose. Goal was to provide a traditionally looking website of Rajasthan origin to enhance the view of website.

### Evasee*(HTML, React)*      **Nov 2020**

- This project is a react.js based Ecommerce website.

- My Goal was to create a deign that look pretty handy for Client side dashboard and also admin side both

- In This project I've worked Closely with the react developer due so much sensitive design elements to aligned

- Learned to work with the react js some basic practice to integrate the dashboard and complete the project with deadline

### Groove sense *(Website, App UI)*      **Jan 2020**

- An AI based project for playing music for a DJ system. It provide a user to host a party and sync the playlist of all other music app into it.

- I've create the first UI design and prototype of the project and did the ux research part for the app. Created some vector animation for the design in Lottie framework.

- Provided single Website design based on fullpage.js framework and wow.js, With minimalistic design

### Yalla Classes *(Ionic frontend)*      **Aug 2020**

- Goal was to provide an ionic based frontend design for development team

- I create a component based structure for the app based on the ui provided by the client. As per client's requirements was to provide a pixel perfect work

### Kullcontent *(HTML, Ecommerce)*      **Sep 2020**

- An Spanish based website for educational purpose similar to udemy.

- I've created there design and in HTML and integrated that into WordPress theme .

- Changed the current theme with to the design suggested by client only with the help of css

### FundsaiQ *(HTML, Angular)*      **Nov 2020**

- An SIlicon valley based Startup for predicting best results for stocks.

- use a team of well trained data scientist which provide data in the form of api's and our task is to show case them.

- Our Goal is to provide well define dashboard design to them which could make it easy to understand & work with it.

### Artenz*(HTML, Ecomerce)*      **Nov 2020**

- Its an art gallery website to showcase the Trending arts and sell the to there people who value them.

- In This project I've worked Closely with the react developer due so much sensitive design elements to aligned

- Learned to work with the react js some basic practice to integrate the dashboard and complete the project with deadline
