Project Profile:

Project Title	**MyHolidays - Tours & Travels Office Management**
Technology	PHP, MySql, Html, Bootstrap, Codeignitor Framework
Develop at	Nath IT Solutions
Team Size	3

Project Description:
My Holidays is tours & Travels business. This is official Serverside application of My Holidays used internally to manage tour. Before this application they do all the office work using ms-office. But after web application they increase 50% faster in their work.

Role/Responsibility:

- Working on Admin dashboards to create & manage different Tours.

- Worked on different controllers & models to perform database operations.

- Working on Convert form data to Pdf file using third party Pdf library.

Project Name	Saptarang Festival [Event Management Web App]
Technology	PHP, MySql, Html, Bootstrap
Develop at	Nath IT Solutions
Team Size	4

Project Description:

Saptarang Trust is an organization based on Nanded. They organized every year the national and international festival Saptarang for dance.

The main reason for developing this application was to do manage thousands of applications from their event reports, hosting, breakfast, dinner, event report, certificate, and medal distribution.

Role/Responsibility:

- Main Challenge in the project was creating **paperless Event**. i.e Reduce paper work
- After creating online Application form to apply participants in Saptarang Festival from India & abroad participants increased from **300 to 750** & also save postal expenditure of participants.
- We did create pdf of event broacher & displaying it on web application to download it. Because of this our client get succeed to **save printing cost & postal cost of event broacher.**
- To manage entire event we develop administrator panel, here the role of admin is to mange participant, assign dance schedules according to their participant's age category, Track performance, printing reports.
- To Track participants, we **use barcode integration** in the project, though which we succeed in **managing crowd**.
- In this application, we use **sms integration** to send sms to participants dynamically after filling form, reporting.
- Working with the user login module, here admin creates another user to manage the event. Each user has their login credentials & control panel to manage participants in different department, i.e. Participant reporting for an event, Sound Submission to perform dance, certificate taken status, trophy submission tracking.
- To solve bugs in the products after deployment testing.
- We solved their real time problem, for this achievement they honored our company with a trophy.

'
