PRODUCT NAME: SMMS (Shipping Maintenance and Management System) Enterprise:
Technology and Tools: .NET Platform.
Tools: Manual/TFS.
Role: Tester.

SMMS (Shipping Maintenance and Management System) standard software which provide all kinds of on board jobs such as planned maintenance, Crew Control, Purchases & Requisitions, Dry dock Management, Safety Management, Complete Inventory Control, Electronic Forms & Documentation on ship. As mentioned SMMS is being used on thousand vessels with two different versions viz. SMMS Standard suite and SMMS Enterprise suite (customized/latest version with some new additional features such as HSQE (Health Safety & Quality Environment), vessel positioning monitoring system, Customizable Dashboard for quick access to Important Info. and pending tasks, Multi-Level Approvals & Digital Signatures) this enterprise version is now most demanding software for our most of the clients. In short, SMMS provides a user complete control over all aspects of ship management which ultimately helps to reduce overall costs while managing every aspect by taking control through the software.

Roles and Responsibilities:

- Performing UI Design Testing and Functional Testing.
- Analyze the Results.
- Report the Bugs.
- Modifying Tests and performing Re & Regression Testing again & again.
- Communication with the Test Lead / Test Manager.

PROJECTS PROFILE:

Project #1: Festival Head Website & Mobile App (Android, iPhone)
Technology and Tools: PHP, Laravel.
Tools: Manual.
Role: Tester.

Description:

Festival Head website carries two main components viz. Events and Newsfeed. This website provides rights/permissions to view & share comments by utilizing two above mentioned components. The aim of this website is to provide two different types of search facilities as an example search by events & search by genre to users. For the exchange of information users can use different mode of channels as an example by uploading Photos/videos, by commenting in terms of description and most importantly through news feed. Here, 'Admin' is only the prime mover of festival head events .This central character (who is an 'Admin') has major responsibility to define the source of 'Buy Ticket' for those respective users who were requested.

Project #2: TIRIPANO Website
Technology and Tools: PHP, Laravel.
Tools: Manual.
Role: Tester.

Description:
'TIRIPANO' website is categorized into three different sections viz. user (service provider & service seeker), Admin and Sub-Admin. Admin is the only prime mover of this website who handles every activity in 'TIRIPANO'. The main motive of 'TIRIPANO' is to allow users for finding relevant jobs that matched with their profile. It facilitates users to apply towards interested job at the same time when they had found. 'TIRIPANO' act like an interface which majorly concerned with service seeker and service provider. Each user has own distinct role as example job seekers can post their jobs and service providers will bid on the posted jobs. Once Service provider bid for specific job then service seeker can hire that specific service provider for suitable job. In addition, it also provides two redeeming features as an example chatting and shared promo code features. This promo code with deep link facilitates users to acts as a referral code for further recommendation in future.

Project #3: eVaRdE Mobile App (Android, iPhone)
Technology and Tools: React Native & Node JS.
Tools: Manual.
Role: Tester.

Description:

This app main motive is to provide several types of services to users viz. for giving products, exchanging products, ask services and recycling of products etc. The core functionality of this app is based on the number of points add for individual user. 'Admin' can calculate points on the basis of two different parameters viz. Country and Currency. If any user achieved high points score then that particular user will be awarded as a 'Hero of the Month' by the admin. 'Admin' is only responsible for all user data management. In addition, 'Admin' could also give a variety of authorities to users as an example search product by name or category, be to search product either by name or by category. Hence, the success & total number of deals in progress on the platform can be visible to all users.

Roles and Responsibilities:

- Performing UI Design Testing and Cross-Browser Testing.
- Executing Test Cases and Generating Test summary Reports.
- Several types of Testing activities are performed in above mentioned Projects as an example: Sanity, Regression, Re-testing, Integration, System, User acceptance, Adhoc, Functional, Non-Functional, Database, Usability, Cross Browsing Testing and Responsive (only for mobile applications).
- Analyze the Results.
- Report the Bugs.
- Modifying Tests and performing Re & Regression Testing again & again.
- Communication with the Test Lead / Test Manager.
