Career Objective:

Looking for a challenging role in a reputable organization to utilize my technical, database, and management skills for the growth of the organization as well as to enhance my knowledge about new and emerging trends in the IT sector.

Training:

➢ I have completed my 6 months **PHP** training in **IT Spark** from Apr 2016 to Sep 2016. I also done a projects during our php training in Magento.

Work Experience:

➢ I have total 3 year experience in php.
➢ I have worked 1.9 year in Infonext Solutions Ltd.
➢ I have worked 6 months in NextOlive Technology Pvt. Ltd.
➢ Currently working in Chetu India Noida .

Projects:

➢ I have Worked on 5 Projects on Laravel.
➢ Working for a project as a fixing bugs and doing all clients issues and has delivered successfully now.
➢ Currently working on job recruitment projects which also a most awaited project for me and there is also three panel one is Admin, Job Seeker and Company . Jobseeker can post his/her details with cv after or before registration and can apply for jobs posted by company. Company can post their jobs as per his/her requirement. And will get the right candidate after having the interviews.
➢ Also working on two projects of laravel in which one is near about completed which are Developed in laravel have three panel one is customer which will used services, another one create business profile to work in his local or else, where he/she can serve their services and will register his services with company and can customer reviews his completed works so that next person with fill find that business with the ease.
➢ One Project is **Vivid calculator** which was to calculate Heart measurement was done behalf of different parameter where was a user panel and admin panel user calculated their results was out and also add this user input and result to db to view by admin.
Admin was able to import data from Datatables and search that data from different parameter delete is also available there and a Graph to represents different calculations with their number of user.

- One Project is that where Optimus where I worked some modules like to display data for admin like top 5 user sales point out the location using pins and create territory and assign territory to multiple sales representative which will get a text message to their contact number. They can Add Pin, Edit Pins but within 400 Feets. And, for every change there is a log maintain for every pins. Admin Should have a leader board with top 5 users sales data fot the months and have a Main graph which is representing the main data like total sales with in the month date wise. And other 4 with top 2 and bottom 2. User can Edit their Profile.

- Currently I am working on LondCap in this Project one is User who can register as Company Or Investor , a investor can search a company and a company search a register. There is a 3 user user0 who will search only not registered user .

- The most important project is that, I made a system for code editor using codeigniter using web browser, manage roles, modules and users, assign roles to user and assign menus to role. Create new module using web browser like I have made using this system with ace editor, Codeigniter, mysql, php, ajax, bootstrap, css, jquery and html. In this system a developer can create his/her own modules and after creation of successfully of their code he/she can publish code to check that module is working or not while publish the code he/ she can check that code is okay on not if is it okay click on publish else discard than the module will be deleted.

- I am working in Infonext Solutions Ltd as a Software development on project attendance management system and leave management system. In my projects I have used my skills core php, codeigniter, html, css, bootstrap, mysql, javascript, jquery, ajax which is a live project in this projects a HR is having a vital role to manage the attendance as well as leave of employees every employee has their own login and password to mark the attendance and apply for on behalf of balanced leave are pending in their account.

Technical Skills:
